

Object Oriented Programming Laboratory

Lab 1 – Structures in C (Revision)

Duration: 2 Hours | Total Questions: 10

Q1. Student Details

Create a structure **Student** containing:

- Roll Number
- Name
- Age
- CGPA

Accept details of one student and display them.

Q2. Employee Record

Create a structure **Employee** containing:

- Employee ID
- Name
- Salary

Accept details of 3 employees and display all the records.

Q3. Book Information

Create a structure **Book** containing:

- Book ID
- Title
- Author Name
- Price

Accept details of one book and display them neatly.

Q4. Product Details

Create a structure **Product** containing:

- Product ID
- Product Name
- Price
- Quantity

Accept the details and calculate the total cost (Price × Quantity).

Q5. Rectangle

Create a structure **Rectangle** containing:

- Length
- Breadth

Find and display the area and perimeter.

Q6. Distance

Create a structure **Distance** containing:

- Feet
- Inches

Accept two distances and display their total distance (ignore conversion if inches exceed 12).

Q7. Student Marks

Create a structure **Student** containing:

- Roll Number
- Name
- Marks in C
- Marks in Mathematics
- Marks in Physics

Calculate the total marks and average.

Q8. Largest Salary

Create a structure **Employee** for 5 employees. Display the details of the employee having the highest salary.

Q9. Array of Structures

Create a structure **Student** containing:

- Roll Number
- Name
- CGPA

Store details of 5 students and display only those students whose CGPA is greater than or equal to 8.0.

Q10. Nested Structure

Create two structures:

- Date (Day, Month, Year)
- Student (Roll Number, Name, Date of Birth)

Accept and display the complete information of one student.
